

NEW PRODUCT RELEASE

Ultra-HardTop P4 Plus

New Ultra-HardTop P4 Plus safely stores hazardous drums outdoors. Designed to accommodate four (4) 55-gallon drums, the unit features a unique “2-way” entry system. To access drum tops, the ergonomically-friendly, roll-top cover can be easily lifted from waist height. To load or unload drums, swing-out doors provide safety and convenience. The lockable, “2-way” entry system is located on two opposite sides of the unit, allowing quick access to all four (4) drums.

Tall, inner head space allows drum pumps and conical funnels to be left in place when the unit is closed. Low profile (8.75”) containment pallet positions drum-top funnels at a safe, convenient level to pour hazardous wastes – splash potential is significantly reduced.

All-polyethylene Ultra-HardTop P4 Plus will not rust or corrode. Optional polyethylene loading ramp stores neatly inside the unit when not in use. Meets SPCC requirements and EPA Container Storage Regulation 40 CFR 264.175 and helps comply with NPDES, 40 CFR 122.26 (1999). Considered a Stormwater Management “Best Management Practice” product (BMP).
